

Management Recommendation Priority Summary

The following table prioritizes numerous management recommendations for the Mount Holly Marsh Preserve Property. Numerous recommendations and suggestions for engaging the local community and developing public participation have not been included in the summary table. Though important, these recommendations may require long term growth and development. The table below prioritizes task oriented recommendations.

| UNIT | RECOMMENDATION | PRIORITY RANKING |
|--------------------|---|------------------|
| 12 | Begin invasive species control: target ailanthus, paulownia and barberry. | 1 |
| 1 | Control ailanthus off Yellow Ridge Trail | 1 |
| 2 | Control ailanthus on hiking trails | 1 |
| 1 | Institute 100' "no canopy disturbance" buffer around wetlands and stream corridor | 1 |
| 12 & 13 | Begin invasive species control | 1 |
| 5 & 10 | Consider a silvicultural thinning across all diameter classes | 2 |
| 5 & 10 | Consider deer fencing following thinning | 2 |
| 6 | Consider crop tree release in tandem with thinning in Unit 5 | 2 |
| 12 & 13 | Plan supplemental planting follow invasive species control | 2 |
| 12 & 1 | Monitor existing ailanthus for spotted lantern fly | 2 |
| 3 | Warm season grass planting | 3 |
| 7 | White pine seedling release treatment | 3 |
| All | Develop seasonal schedule for forest health and maintenance monitoring | 2 |
| All | Consider enrollment in DMAP program | 1 |
